Incident Report: Active Response (Auto-Block)

Report ID: IR-04
Date: 2026-10-28
Analyst: Lekhraj Dheerani

1. Executive Summary

On October 28, 2026, a simulated SSH brute-force attack was executed against localhost (127.0.0.1) to test Wazuh's Active Response capability. After 7 consecutive failed login attempts, Wazuh's custom rule 100001 triggered an automated defense mechanism. The `firewall-drop` script was executed by the Wazuh manager, which immediately added an iptables rule to block the attacker's IP (127.0.0.1) for 600 seconds. Subsequent connection attempts resulted in a "Connection timed out" error, confirming the block was successful. The IP was later manually unblocked by the analyst to restore local testing.

2. Attack Details

Field	Value
Attack Type	SSH Brute Force
Source IP	127.0.0.1 (Blocked)
Target	Kali Linux (localhost)
Port	22 (SSH)
Attack Command	`sshpass` loop (7 attempts)
Auto-Block Time	600 seconds

3. Detection & Response

Rule ID: 100001 (SSH Failed Login)
Rule Level: 10
Rule File: `local_rules.xml`
MITRE ATT&CK: T1110 (Brute Force)

Active Response Configuration

"'xml firewall-drop firewall-drop yes

no firewall-drop local 100001,100002 600

Verification (Proof from Screenshot)

The following evidence confirms the block was active: 1. **Connection Timed Out:** During the attack loop, subsequent SSH attempts failed with `Connection timed out`. 2. **iptables Rule:** The command `sudo iptables -L INPUT -v -n | grep 127.0.0.1` showed: "'text DROP all – 127.0.0.1 0.0.0.0/0
